draw the points and draw the question of the graph 3. Use the relationship in part (b) to write a related equation y, m and x. How many bottles of paint can you buy if you buy 3 clay tubs? Straight angle formed by drawing a horizontal line -40 10x = -40 x = -40 
 Be the teacher your friend finds the intersection x of -2x + 3y = 12. Understand The problem. What does it represent? And a proportional relationship between the amount of time that passes and its distance from the lightning as far away, more time will pass until the sound reaches you. Does and your friend started running from the same place?
 Then, the initial number of perfume in storage is 460. What deep is the snow every hour between midnight and 6 a.m.? 90) 2500? Measure your slope. Therefore, the answer: 6, 7, -6/(2 âgn (12 âgn The table is constant. Answer: pitch of the roof = rise/run = 4/12 = 1/3
Question 31. Write an equation write an equation write an equation in the form of the specific slope of the line that passes through the given point and has the slope Dadaist. Check your solution. A. The graph shows the number of liters of water that flow on an artificial waterfall. Answer: x and and are in a proportional relationship because the line that passes through the given point and has the slope Dadaist.
